                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC human mpGES-1 gene is located on chromosome 9, more specifically to G234.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 by targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADM14004/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 833
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The Chuman mpGES-1 gene is located on chromosome 9, more specifically to CC q343.3. The present invention also describes: (1) antisense compounds, CC maying a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, antidiabetic, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                            Matches

The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's condisease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9344.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid meGES-1 and inhibits its expression, (2) a method of inhibiting the expression of mPGES-1 in cells or tissues, and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense compound, having a sequence targeted to a nucleic acencoding mPGES-1, useful for preparing a composition for treating inflammation, Alzheimer's disease, arthritis, diabetes, cancer or

                                                                                                                         The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to 9q34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1; mctoric; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; meuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; anunological disorder; cardiovascular; anunological disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CI inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonuclectides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can composite as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC conthibutor; diabetes, cancer, ischaemia or reperfusion injury, or conthibutorical disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or conthibutorical disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The CC human mPGES-1 gene is located on chromosome 9, more specifically to Q934.3. The present invention also describes: (1) antisense compounds, CC mPGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits its expression; (2) a method of inhibiting the expression of CC mPGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mPGES-1. MPGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cyrostatic, cophthalmological, immunomodulator, cardiant, neuroprotective, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mPGES-1 e-g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 838

                                                                                                                                                                                        ş
                                                                                                                                                                                                                                                                                                        The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The CC human mPGES-1 gene is located on chromosome 9, more specifically to CC 9934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mPGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mPGES-1. MPGES-1 chimeric CC antisense coligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, and can can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound cC can be used for preparing a composition for treating a disease or CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or CC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                      Query Match

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to g934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid encoding conhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal chaving a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisinse oligonucleotides and antisense compounds have cytostatic, and cantiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antisinflammatory, neuroprotective, nootropic, antistatinglacial, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.

         The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9q34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 842
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9q34.3. The present invention also describes: (1) antisense compounds, charing a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and chibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal compounds are compounded and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, cantisense oligonucleotides and antisense compounds have cytostatic, contininflammatory, neuroprotective, nontropic, antiaristic, vasotropic, antiinflammatory, neuroprotective, nontropic, antisense compound can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's compound condition co
                                                                                                                                                                                                                                                                                                                                                                                                            chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibitor; microsomal prostaglandin E2 synthase; inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin 82 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC maying a disease or condition associated with mpGES-1 hmpGES-1 chimeric CC antisense oligonuclectides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, antiatribritic, vasotropic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's contributions, diabetes, cancer, ischaemia or reperfusion injury, or condition associated with mpGES-1 e.g., inflammation, Alzheimer's contributions, diabetes, cancer, ischaemia or reperfusion injury, or condition associated with mpGES-1 e.g., inflammation, Alzheimer's contributions of the condition associated with mpGES-1 e.g., inflammation or reperfusion injury, or contributions of the condition associated with mpGES-1 e.g., inflammation, alzheimer's contributions of the condition injury, or condition associated with mpGES-1 e.g., inflammation, alzheimer's contributions of the condition injury, or condition associated with mpGES-1 e.g., inflammation, alzheimer condition injury, or condition associated with mpGES-1 e.g., inflammation, alzheimer conditions conditions of the condition injury, or conditions are conditions of the conditions of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective,
                                                                                                                                                                                                                                     antidiabetic, immunomodulator, cardiant, neuroprotective, antiinflammatory, neuroprotective, mootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzhaimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostagiandin EZ synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 by targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antisinflammatory, neuroprotective, nootropic, antistrifical, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound cardiovascular activities, and can be used for preparing a composition for treating a disease or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The chaman mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and cinhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisense oligonucleotides and antisense compounds have cytostatic, CC antifinamatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antiarthrities, and can Cb e used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC contribution of artificial disease or contributed and can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's contributor and cardiovascular activities in injury, or contributor artifical disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC mpGES-1 in cells or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oigonucleotides and antisense compounds have cytostatic, cantidiabetic, immunomodulator, cardiant, neuroprotective, and can be used for preparing a composition for treating a disease or condition associated with mpGES-1 miles, and can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition injury, or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition contents of the condition injury, or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition contents of the condition injury, or condition contents of the condition injury, or condition contents of the condition injury, or conditions of the condition contents of the condition injury, or conditions of the condition condition condition conditions con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpCES-1). The CC human mPGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antigense compounds have cytostatic, contininflammatory, neuroprotective, nouroprotective, antisinflammatory, neuroprotective, notropic, antisinflammatory, neuroprotective, notropic, cophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.

Human; ss;

interleukin-4 receptor; IL-4; interleukin-5 receptor;

```
chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)

-5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,

C tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention

C also relates to a method of screening a candidate compound that binds to

come or more nucleic acid target(s) or expressed product(s), for the

prevention and/or treatment of a respiratory or lung disease. The

c oligonucleotides are useful for reducing or inhibiting expression of a

gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,

                                                                                                                                  밁
                             S
                                                                                                                                                          The invention describes a reagent (1) comprising a particle bound to at Cleast one Raman label and a specific binding member, where the Raman CC label can be activated to provide a surface-enhanced Raman scattering CC (SERS) effect or comprising a specific binding member having two or more CC different Raman labels bound to it. Also described are: a test kit (II), CC comprising (I) in one container and a silver, gold or copper Raman CC enhancer stain in another container, and a fibre optic detection device (III), having a bundle of optical fibres terminating with ends of the CC pitical fibre, where a several of the optical fibres have (I) located at CC the ends of the optical fibre. (I) is useful for: detecting for the CC presence or absence of one or more target analytes in a sample, the CC target analytes having at least two binding sites; detecting the presence CC or absence of one or more target nucleic acid in a sample, the sequence of the nucleic acid having at least two portions; and for screening one CC or more molecules to determine whether the molecule is a ligand to one or more specific receptors. This sequence represents an oligonucleotide associated with the SERS-based detection analyte detection method.
                                                                 Matches

Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'-MOE wings and a deoxy gap, these oligonucleotides inhibit human GFAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding glutamine-fructose-6-phosphate amidotransferase (GFAT), for treating diabetes, a cardiovascular or neurologic disorder. ischemia/reperfusion injury.

                                                                                                                                                                                                                                                                                                                                                                      rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in a xenotransplant rejection or mechanical organ replacement rejection, in a individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a primer for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes.                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of detecting a nucleic acid with at CC least two portions by providing a type of nanoparticle-oligonucleotide CC conjugate, contacting the nucleic acid and nanoparticles to allow CC hybridisation of the oligonucleotides with the two or more portions of CC the nucleic acid and observing a detectable change brought about by Chybridisation. The oligonucleotides have a sequence complementary to the Sequence of at least two portions of the nucleic acid. Hybridisation of CC in a detectable change. The method is used for detection and separation CC in a detectable change. The method is used for detection and separation CC in a detectable change. The method is used for detection and separation CC in uccleic acids (e.g. viral DNA, synthetic DNA, structurally-modified DNA, DNA CC from biological sources or PCR products) for diagnosis of various CC diseases (such as genetic diseases, bacterial infections and viral CC monitoring gene therapy. This sequencing, paternity testing and CC coligonucleotide of the invention.

                                                                                            S
                                                                                                                                                                                                                                         The invention relates to a method of detecting a nucleic acid with at CC least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow CC hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by the nucleic acid and observing a detectable change brought about by the pridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. The method is used for detection and separation of nucleic acids (e.g. viral DNA, a gene associated with a disease, co bacterial DNA, fungal DNA, synthetic DNA, structurally-modified DNA, DNA from biological sources or PCR products) for diagnosis of various of diseases (such as genetic diseases, bacterial infections and viral consistoring gene therapy. This sequencing, paternity testing and consistoring gene therapy. This sequence represents a linking

The antisense oligonucleotides of the invention are useful for modulating mitoNEET expression and for treating diseases or conditions associated with mitoNEET, such as: diabetes, immunological disorders, cardiovascular disorders including hypertension, neurological disorders, and schaemia/reperfusion injuries. The present DNA sequence represents a mitoNEET specific antisense oligonucleotide of the invention. NOTE: The present sequence is a 2'-methoxyethyl (2'-MOE) gapmer with a phosphorothioate backbone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thiazolodinediones (referred to as: mitoNEET). The antisense oligonucleotides of the invention are useful for modulating mitoNEET expression and for treating diseases or conditions associated with mitoNEET, such as: diabetes, immunological disorders, cardiovascular disorders including hypertension, neurological disorders, and ischaemia/reperfusion injuries. The present DNA sequence represents a mitoNEET-specific antisense oligonucleotide of the invention. NOTE: The present sequence is a 2 methoxyethyl (2 MOE) gapmer with a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense oligonucleotides encoding mitoNEET, useful for modulating mitoNEET expression or for treating diseases associated with mitoNEET, e.g. diabetes, immunological disorders or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anorectic; Antidiabetic; Muscular; Gene Therapy; CpG island; IGF2 gene intron 3; muscle mass; fat deposition; teat number muscle deficiency; diabetes; PCR; primer; ss; pig.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method (M1) for selecting an animal comprises testing the animal for the presence of a nucleic acid comprises testing the animal for the presence of a nucleic acid complication affecting; the activity of an evolutionary conserved CpG island located in intron 3 of an IGF2 gene; and/or binding of a nuclear factor to an IGF2 gene. The nuclear factor is capable of binding to a compound for the presence of a nuclear factor is capable of binding to a compound for the IGF2 gene. The nuclear factor is capable of binding to a compound for the IGF2 gene. The stretch is functionally equivalent to (ADQ80709). The nucleic acid modification in ADQ80709 comprises a G to A transition at IGF2-intron3-nt3072. (M1) is useful for selecting an animal with compound in a method (M2) for modulating mRNA transcription of an CG IGF2 gene by modulating the activity of an evolutionarily conserved CpG island located in intron 3 of an IGF2 gene and/or modulating binding of a nuclear factor to an IGF2 gene. Also claimed is a method (M3) for identifying a compound capable of modulating mRNA transcription of an IGF2 gene and a method (M4) for identifying a compound capable of modulating binding of a nuclear factor to an IGF2 gene. Also claimed is a method (M3) is useful compound capable of modulating mRNA transcription of an IGF2 gene in a cell or organism. (M3) and (M4) are useful for identifying a compound capable of modulating mRNA transcription of an IGF2 gene in a cell or organism. (M3) and we seeful for identifying compounds capable of modulating capable of modulating mRNA transcription of an IGF2 gene in a cell or organism. (M3) and we seeful for identifying compounds capable of modulating capable of modulating of a nuclear factor to an IGF2 gene. Compounds identified are potentially useful for identified are potentially useful for identified are potentially useful for in an action in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5

Coperatively linked to an expression control sequence, and isolating the Coperatively linked to an expression control sequence, and isolating the Cransformed or transfected with an expression construct comprising a CC vertebrate SCF polypeptide-encoding DNA operatively linked to a CC heterologous expression regulatory sequence, permitting the expression of the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat CC and human nucleic acids encoding SCF, SCF protein fragments. The DNA CC sequences are useful for effecting the large scale synthesis of SCF by a CC variety of recombinant techniques or for generating new and useful viral CC and circular plasmid DNA vectors, new and useful viral CC and circular plasmid DNA vectors, new and useful viral CC and circular plasmid products. The DNA sequences are also useful viral CC and the related products. The DNA sequences are also useful viral CC and its related products. The DNA sequences are also useful as of protein synthesis, in genetic therapy in humans and other mammals, and CC protein synthesis, in genetic therapy in humans and other mammals, and CC paroxymmal nocturnal haemoglobinuria, myelofibrosis, multiple myeloma, CC useful for treating haematopoietic disorders, e.g., aplastic anaemia, CC paroxymmal nocturnal haemoglobinuria, myelofibrosis, multiple myeloma, CC disorders such as piebaldism and vitamin B 12 and folite acid deficiency, Diamond Blackfan anaemia, Di Guglielmo CC syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary consisting neurological damage, infertility states, intestinal damage consisting neurological damage, infertility states, intestinal damage consisting neurological damage, infertility states, intestinal damage consisted consolutes and as a consoluting from irradiation or chemotherapy, and AIDS. SCF is also useful for resulting neurological states for fighting neoplasia (cancer). The present consoluting from a miliary tubes of the present consoluting the myelocal sciency. The present consoluting the macro

                       The invention relates to preparing a (vertebrate) human stem cell factor (CC (SCF) polypeptide comprising growing host cells transformed or cransfected with DNA encoding a human SCF that stimulates growth of the comprising a proving host cells transformed or comprising a human SCF that stimulates growth of the comprising a human SCF that stimulates growth of comprising a proving host cells under nutrient conditions, the DNA being coperatively linked to an expression control sequence, and isolating the copyright of the comprising a construct comprising a converted comprising a converted comprising a converted comprision regulatory sequence, permitting the expression of the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat combinant nucleic acids encoding SCF, SCF proteins from a number of other commission and recombinantly expressed SCF protein fragments. The DNA sequences are useful for effecting the large scale synthesis of SCF by a variety of recombinant techniques or for generating new and useful viral candidate and circular plasmid DNA vectors, new and useful transformed and crackery protein host cells, and new and useful as constituted prowth of such host cells capable of expression of CC scholad propagations. The DNA sequences are also useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              10-APR-1991;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 859
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC of protein synthesis, in genetic therapy in humans and other mammals, and Ci in developing transgenic mammalian species which may serve as eukaryotic consts for production of SCF and SCF products in quantity. The SCF is useful for treating haematopoietic disorders, e.g., aplastic anaemia, CC paroxysmal nocturnal haematopoietic disorders, e.g., aplastic anaemia, CC paroxysmal nocturnal haematopoietic disorders, in quantity. The SCF is steopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, CC Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease, CC Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease, CC syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary CC splenic pancytopaenia, malaria, vitamin B 12 and folic acid deficiency, pyridoxine deficiency, Diamond Blackfan anaemia, and hypopigmentation CC disorders such as piebaldism and vitiligo. The SCF are also useful for treating neurological damage, infertility states, intestinal damage resulting from irradiation or chemotherapy, and AIDS. SCF is also useful for the bhancing haematopoietic recovery after acute blood loss and as a CC boost to the immune system for fighting neoplasia (cancer). The present sequence is a universal SCF PCR primer used in the isolation of SCF DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                   A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 JP06303997-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Reverse transcription primer used in cDNA analysis technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                            The sequence is that of a bovine microsatellite sequence obtd. by CC screening a library of bovine MboI DNA fragments of between 250 and 500 cp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50 cc clones cross-hybridised. Assuming independent distribution of microsatellites and MboI sites, the frequency of (T6)n .9 microsatellites cc in the bovine genome is estimated at >100, 000. The sequence information cf for ca. 230 such bovine microsatellites is summarised in the specification and indexed herein (see below). The sequences upstream and cdownstream of the microsatellite sequence were used to generate the required PCR primers for in vitro amplification of the corresp.

CC microsatellite (using the program OPTIPRIM). The microsatellites may be used to identify individuals, for parentage testing, and in the genetic mapping of economic trait loci, or genes involved the determinism of considerily important traits esp. in cattle, to allow selective breeding.                          A method for the analysis of cDNA comprises (a) preparing an aggregate (double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GRNESEQ files Ap075547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes.                                                                                                                                                                                                                                                                                                                                                           A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESSQ files AQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                 Sequence

The method can be used to analyse gene expression rapidly and easily
                                                       Analysis of cDNA and gene expression - by by digestion with restriction enzymes.
                                                                                                                                                    16-APR-1993;
                                                                                                                                                                               16-APR-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                            A method for the analysis of cDNA comprises (a) preparing an aggregate (double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily

The method can be used to analyse gene expression rapidly and easily

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                 Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Reverse transcription primer used in cDNA analysis technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-AUG-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Analysis of cDNA and gene expression - by digestion with restriction enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1995-018287/03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-APR-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                       A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAO75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) the double stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in separate lines. The electrophoresing the digested aggregate of cDNAs in separate lines.
